

A. New Year Transportation

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

New Year is coming in Line World! In this world, there are n cells numbered by integers from 1 to n , as a $1 \times n$ board. People live in cells. However, it was hard to move between distinct cells, because of the difficulty of escaping the cell. People wanted to meet people who live in other cells.

So, user tncks0121 has made a transportation system to move between these cells, to celebrate the New Year. First, he thought of $n - 1$ positive integers a_1, a_2, \dots, a_{n-1} . For every integer i where $1 \leq i \leq n - 1$ the condition $1 \leq a_i \leq n - i$ holds. Next, he made $n - 1$ portals, numbered by integers from 1 to $n - 1$. The i -th ($1 \leq i \leq n - 1$) portal connects cell i and cell $(i + a_i)$, and one can travel from cell i to cell $(i + a_i)$ using the i -th portal. Unfortunately, one cannot use the portal backwards, which means one cannot move from cell $(i + a_i)$ to cell i using the i -th portal. It is easy to see that because of condition $1 \leq a_i \leq n - i$ one can't leave the Line World using portals.

Currently, I am standing at cell 1, and I want to go to cell t . However, I don't know whether it is possible to go there. Please determine whether I can go to cell t by only using the constructed transportation system.

Input

The first line contains two space-separated integers n ($3 \leq n \leq 3 \times 10^4$) and t ($2 \leq t \leq n$) — the number of cells, and the index of the cell which I want to go to.

The second line contains $n - 1$ space-separated integers a_1, a_2, \dots, a_{n-1} ($1 \leq a_i \leq n - i$). It is guaranteed, that using the given transportation system, one cannot leave the Line World.

Output

If I can go to cell t using the transportation system, print "YES". Otherwise, print "NO".

Examples

input
8 4 1 2 1 2 1 2 1
output
YES
input
8 5 1 2 1 2 1 1 1
output
NO

Note

In the first sample, the visited cells are: 1, 2, 4; so we can successfully visit the cell 4.

In the second sample, the possible cells to visit are: 1, 2, 4, 6, 7, 8; so we can't visit the cell 5, which we want to visit.

Good Bye 2014
