

A. Vasya and Digital Root

time limit per test: 1 second

memory limit per test: 256 megabytes

input: standard input

output: standard output

Vasya has recently found out what a digital root of a number is and he decided to share his knowledge with you.

Let's assume that $S(n)$ is the sum of digits of number n , for example, $S(4098) = 4 + 0 + 9 + 8 = 21$. Then the digital root of number n equals to:

1. $dr(n) = S(n)$, if $S(n) < 10$;
2. $dr(n) = dr(S(n))$, if $S(n) \geq 10$.

For example, $dr(4098) = dr(21) = 3$.

Vasya is afraid of large numbers, so the numbers he works with are at most 10^{1000} . For all such numbers, he has proved that $dr(n) = S(S(S(S(n))))$ ($n \leq 10^{1000}$).

Now Vasya wants to quickly find numbers with the given digital root. The problem is, he hasn't learned how to do that and he asked you to help him. You task is, given numbers k and d , find the number consisting of exactly k digits (the leading zeroes are not allowed), with digital root equal to d , or else state that such number does not exist.

Input

The first line contains two integers k and d ($1 \leq k \leq 1000$; $0 \leq d \leq 9$).

Output

In a single line print either any number that meets the requirements (without the leading zeroes) or "No solution" (without the quotes), if the corresponding number does not exist.

The chosen number must consist of exactly k digits. We assume that number 0 doesn't contain any leading zeroes.

Examples

input
4 4
output
5881
input
5 1
output
36172
input
1 0
output
0

Note

For the first test sample $dr(5881) = dr(22) = 4$.

For the second test sample $dr(36172) = dr(19) = dr(10) = 1$.

Codeforces Round #206 (Div. 2)

Finished

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
