

## A. Almost Prime

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

A number is called almost prime if it has exactly two distinct prime divisors. For example, numbers 6, 18, 24 are almost prime, while 4, 8, 9, 42 are not. Find the amount of almost prime numbers which are between 1 and  $n$ , inclusive.

### Input

Input contains one integer number  $n$  ( $1 \leq n \leq 3000$ ).

### Output

Output the amount of almost prime numbers between 1 and  $n$ , inclusive.

### Examples

<b>input</b>
10
<b>output</b>
2

<b>input</b>
21
<b>output</b>
8

### → Attention

Package for this problem was not updated by the problem writer or Codeforces administration after we've upgraded the judging servers. To adjust the time limit constraint, solution execution time will be multiplied by 2. For example, if your solution works for 400 ms on judging servers, then value 800 ms will be displayed and used to determine the verdict.
