

A. Free Ice Cream

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

After their adventure with the magic mirror Kay and Gerda have returned home and sometimes give free ice cream to kids in the summer.

At the start of the day they have X ice cream packs. Since the ice cream is free, people start standing in the queue before Kay and Gerda's house even in the night. Each person in the queue wants either to take several ice cream packs for himself and his friends or to give several ice cream packs to Kay and Gerda (carriers that bring ice cream have to stand in the same queue).

If a carrier with d ice cream packs comes to the house, then Kay and Gerda take all his packs. If a child who wants to take d ice cream packs comes to the house, then Kay and Gerda will give him d packs if they have enough ice cream, otherwise the child will get no ice cream at all and will leave in distress.

Kay wants to find the amount of ice cream they will have after all people will leave from the queue, and Gerda wants to find the number of distressed kids.

Input

The first line contains two space-separated integers n and x ($1 \leq n \leq 1000$, $0 \leq x \leq 10^9$).

Each of the next n lines contains a character '+' or '-', and an integer d_i , separated by a space ($1 \leq d_i \leq 10^9$). Record "+ d_i " in i -th line means that a carrier with d_i ice cream packs occupies i -th place from the start of the queue, and record "- d_i " means that a child who wants to take d_i packs stands in i -th place.

Output

Print two space-separated integers — number of ice cream packs left after all operations, and number of kids that left the house in distress.

Examples

input
5 7 + 5 - 10 - 20 + 40 - 20
output
22 1

input
5 17 - 16 - 2 - 98 + 100 - 98
output
3 2

Note

Consider the first sample.

Codeforces Round #359 (Div. 2)

Finished

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.

- Announcement 
- Tutorial 

1. Initially Kay and Gerda have **7** packs of ice cream.
2. Carrier brings **5** more, so now they have **12** packs.
3. A kid asks for **10** packs and receives them. There are only **2** packs remaining.
4. Another kid asks for **20** packs. Kay and Gerda do not have them, so the kid goes away distressed.
5. Carrier bring **40** packs, now Kay and Gerda have **42** packs.
6. Kid asks for **20** packs and receives them. There are **22** packs remaining.
