

## C. Woodcutters

time limit per test: 1 second

memory limit per test: 256 megabytes

input: standard input

output: standard output

Little Susie listens to fairy tales before bed every day. Today's fairy tale was about woodcutters and the little girl immediately started imagining the choppers cutting wood. She imagined the situation that is described below.

There are  $n$  trees located along the road at points with coordinates  $x_1, x_2, \dots, x_n$ . Each tree has its height  $h_i$ . Woodcutters can cut down a tree and fell it to the left or to the right. After that it occupies one of the segments  $[x_i - h_i, x_i]$  or  $[x_i; x_i + h_i]$ . The tree that is not cut down occupies a single point with coordinate  $x_i$ . Woodcutters can fell a tree if the segment to be occupied by the fallen tree doesn't contain any occupied point. The woodcutters want to process as many trees as possible, so Susie wonders, what is the maximum number of trees to fell.

### Input

The first line contains integer  $n$  ( $1 \leq n \leq 10^5$ ) — the number of trees.

Next  $n$  lines contain pairs of integers  $x_i, h_i$  ( $1 \leq x_i, h_i \leq 10^9$ ) — the coordinate and the height of the  $i$ -th tree.

The pairs are given in the order of ascending  $x_i$ . No two trees are located at the point with the same coordinate.

### Output

Print a single number — the maximum number of trees that you can cut down by the given rules.

### Examples

input
5 1 2 2 1 5 10 10 9 19 1
output
3

input
5 1 2 2 1 5 10 10 9 20 1
output
4

### Note

In the first sample you can fell the trees like that:

- fell the 1-st tree to the left — now it occupies segment  $[-1; 1]$
- fell the 2-nd tree to the right — now it occupies segment  $[2; 3]$
- leave the 3-rd tree — it occupies point 5
- leave the 4-th tree — it occupies point 10
- fell the 5-th tree to the right — now it occupies segment  $[19; 20]$

### Codeforces Round #303 (Div. 2)

Finished

#### → Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.

- Tutorial 

In the second sample you can also fell 4-th tree to the right, after that it will occupy segment [10;19].
