

## C. Design Tutorial: Make It Nondeterministic

time limit per test: 2 seconds  
 memory limit per test: 256 megabytes  
 input: standard input  
 output: standard output

A way to make a new task is to make it nondeterministic or probabilistic. For example, the hard task of Topcoder SRM 595, Constellation, is the probabilistic version of a convex hull.

Let's try to make a new task. Firstly we will use the following task. There are  $n$  people, sort them by their name. It is just an ordinary sorting problem, but we can make it more interesting by adding nondeterministic element. There are  $n$  people, each person will use either his/her first name or last name as a handle. Can the lexicographical order of the handles be exactly equal to the given permutation  $p$ ?

More formally, if we denote the handle of the  $i$ -th person as  $h_i$ , then the following condition must hold: .

### Input

The first line contains an integer  $n$  ( $1 \leq n \leq 10^5$ ) — the number of people.

The next  $n$  lines each contains two strings. The  $i$ -th line contains strings  $f_i$  and  $s_i$  ( $1 \leq |f_i|, |s_i| \leq 50$ ) — the first name and last name of the  $i$ -th person. Each string consists only of lowercase English letters. All of the given  $2n$  strings will be distinct.

The next line contains  $n$  distinct integers:  $p_1, p_2, \dots, p_n$  ( $1 \leq p_i \leq n$ ).

### Output

If it is possible, output "YES", otherwise output "NO".

### Examples

### Codeforces Round #270

Finished

### → Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.

```

**output**

YES

### Note

In example 1 and 2, we have 3 people: tourist, Petr and me (cgy4ever). You can see that whatever handle is chosen, I must be the first, then tourist and Petr must be the last.

In example 3, if Copernicus uses "copernicus" as his handle, everything will be alright.
