

A. Wet Shark and Odd and Even

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

Today, Wet Shark is given n integers. Using any of these integers no more than once, Wet Shark wants to get maximum possible even (divisible by 2) sum. Please, calculate this value for Wet Shark.

Note, that if Wet Shark uses no integers from the n integers, the sum is an even integer 0.

Input

The first line of the input contains one integer, n ($1 \leq n \leq 100\,000$). The next line contains n space separated integers given to Wet Shark. Each of these integers is in range from 1 to 10^9 , inclusive.

Output

Print the maximum possible even sum that can be obtained if we use some of the given integers.

Examples

input
3 1 2 3
output
6
input
5 99999999 99999999 99999999 99999999 99999999
output
399999996

Note

In the first sample, we can simply take all three integers for a total sum of 6.

In the second sample Wet Shark should take any four out of five integers 999 999 999.

Codeforces Round #341 (Div. 2)

Finished

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
